WEBSITE: immhusnainali.github.io

PROFESSIONAL SUMMARY

Detailed Web Developer with advanced coding abilities and enthusiasm for new enhancements. Expert in building high-performing, scalable structures to meet client requirements. Advanced in HTML, SQL, PHP, and Java. Energetic Web Developer with 2 years of experience. Tests and validates code to improve app performance. Concise communicators and critical thinkers engage with clients to bring features and updates to fruition.

SKILLS

- Website optimization
- Application debugging
- Software testing
- Interface design
- Software Documentation
- Website Updating
- Project Management
- JavaScript
- User Experience Design
- Application design
- Database Management
- Full-Stack Development
- Programming Languages
- HTML5 Proficiency
- UI and UX Prototyping
- CSS
- C# Programming
- Microsoft Teams
- Office 365 Security
- Team Collaboration
- Project Planning
- Excellent Communication
- Problem-Solving
- Multitasking
- MS Office

EXPERIENCE

Web Developer

Skylinks, 2023 – 2024

Developed, designed, tested, and debugged applications from foundational level up to full production levels.

Enhanced applications and improved performance through testing and validations against requirements and performance standards.

Attracted users to websites with attractive, user-friendly designs and clean code for high-performance operation.

Ensured cross-browser compatibility of websites on various platforms.

EDUCATION

Bachelor of Science (B.S.): Software Engineering University of Management and Technology, C-block Johar Town, Lahore, Punjab, Nov 2023

Projects

Skylinks--- Full-Stack Platform with Affiliate Marketing, Video Portal

This response outlines the development of a full-stack platform featuring an affiliate marketing system, a video portal, and functionalities. The backend will be implemented in PHP, while the frontend will utilize Bootstrap, HTML, CSS, and JavaScript.

Backend (PHP):

Project Structure:

A well-organized project structure using directories for controllers, models, views, helpers, configuration, and a public directory for assets and the main entry point (index.php).

Database (MySQL):

A secure connection to a MySQL database using PDO for data persistence. Normalized tables will be created for users (with affiliate tracking fields), affiliates (product/service details), videos,

User Authentication and Management:

A robust user registration, login, and profile management system implemented using PHP sessions or a framework like Laravel's authentication features. Password hashing with bcrypt ensures secure storage of sensitive data.

Affiliate Marketing System:

User model containing affiliated and referred by fields for referral tracking.

Affiliate model storing product/service information, commission rates, and affiliate links.

Tracking referrals using cookies or URL parameters to credit affiliates appropriately.

Affiliate Controller to handle affiliate program views, link generation, and commission tracking.

AffiliateHelper.php with functions for generating unique affiliate links and tracking referrals.

Base Layout:

A responsive layout using Bootstrap's grid system and components for navigation, content areas, and footer.

Consistent and visually appealing styling with CSS for an engaging user experience.

Dynamic elements like dropdowns, modals, and form validation enhanced with JavaScript.

User Interface:

Specific UIs for affiliates, users, videos, and CVs, potentially leveraging Bootstrap's pre-built components for a faster development process.

Accessibility features employing ARIA attributes, focus management, and clear labels for an inclusive design.

Affiliate Marketing UI:

A user-friendly interface for affiliates to view program details, generate links, and track performance.

Data tables can be integrated for visualizing statistics.

Video Portal UI:

Visually appealing video listing with search, filtering, and sorting capabilities for easy content discovery.

Video playback controls or a video player library integrated for an optimal viewing experience.

Jarvis in C++ - Your Voice-Activated Digital Assistant—Imagine a world where technology listens and responds to your every command - that's the essence of my project, Jarvis in C++. Designed as a captivating console-based application, Jarvis brings the future of interaction to the present. With the power to execute voice commands, search your PC, delve into Google, and even serenade you with your favorite tunes, Jarvis isn't just a project; it's a technological marvel that blends innovation with user centric convenience.

Food ordering Application—Desktop application with SQL backend (Developed in C# (.Net)). This application would provide users with all the basic services of the restaurant with an attractive interface. This application is designed for android users and includes sections like About Us, Categories, Recent, Help, Order History, Profile and Save Image and Contact us. Technologies Utilized: C# .NET: The application's foundation, enabling robust development and seamless integration of features. MySQL: Powering the application's backend, ensuring efficient data management and retrieval. MVVM (Model-View-View Model) Architecture: Implementing a structured approach, enhancing maintainability and scalability. In this project, I have not only showcased my technical acumen but also demonstrated my ability to create meaningful solutions that cater to user needs and enhance their experience. The Restaurant Desktop Application exemplifies the convergence of technology and customer-centricity, reflecting my commitment to crafting innovative solutions that make a tangible impact
