SKILLS

- Android Development (Flutter)
- Software Testing
- Problem Solving
- Team Player
- Project Management
- Strong Communication
- Manual/Automation Testing

EDUCATION

BS. SOFTWARE ENGINEERING

University of Management and
Technology, Lahore (2019-23)
CGPA: 3.12/4.00

FSC PRE-ENGINEERING

PGC, OKARA

LANGUAGES

- C++
- C# (.NET)
- DART(FLUTTER)
- PHP(LARAVEL)
- HTML 5
- CSS
- BOOTSTRAP
- JAVASCRIPT

EXPERIENCE

FINAL YEAR PROJECT

2022-2023

- **WEB DEVELOPMENT**

2020-2023

- **DESKTOP APPLICATION
DEVELOPMENT**

2020-2023

MOBILE APP UI/UX

Figma

- Creating Ui/UX
- Prototypes

COURSES

- Programming Fundamental
- OOP
- Data Structure and Algorithms
- Database Management
- Web Engineering
- Advance Web Technologies
- Mobile Development
- Internet of Things (IOT)

Projects

BOOK ERA MOBILE APP(FLUTTER)— It was my final year project in cutting-edge mobile application, Book Era revolutionizes the way we explore and obtain books. With an extensive library of titles readily accessible, the app invites users to embark on a captivating literary journey. From exploring featured reads to finding specific titles, and from reading reviews to relishing book summaries, Book Era seamlessly blends convenience with choice. It's not just an app; it's an open invitation to uncover the perfect book, all within arm's reach and in mere moments.

Website: I've also created a live website to complement the mobile application, providing users with an additional platform to explore our Company. Visit <https://bookera.com.pk> to experience the world of Book Era online and discover the joy of reading.

Project: Jarvis in C++ - Your Voice-Activated Digital Assistant—Imagine a world where technology listens and responds to your every command - that's the essence of my project, Jarvis in C++. Designed as a captivating console-based application, Jarvis brings the future of interaction to the present. With the power to execute voice commands, search your PC, delve into Google, and even serenade you with your favorite tunes, Jarvis isn't just a project; it's a technological marvel that blends innovation with user-centric convenience.

Food ordering Application—Desktop application with Sql backend (Developed in C# (.Net)). This application would provide users with all the basic services of the restaurant with an attractive interface. This application is designed for android users and includes the sections like About Us, Categories, Recent, Help, Order History, Profile and Save Image and Contact us.

Technologies Utilized:

- **C# .NET:** The application's foundation, enabling robust development and seamless integration of features.
- **MySQL:** Powering the application's backend, ensuring efficient data management and retrieval.
- **MVVM (Model-View-ViewModel) Architecture:** Implementing a structured approach, enhancing maintainability and scalability.

In this project, I have not only showcased my technical acumen but also demonstrated my ability to create meaningful solutions that cater to user needs and enhance their experience. The Restaurant Desktop Application exemplifies the convergence of technology and customer-centricity, reflecting my commitment to crafting innovative solutions that make a tangible impact.
